

Mobile Saito Tank

Challenge though "water" to the people in the world

MST LAOS Ver.

Making Saito Tank trial run in Vientiane, LAOS in January, 2013.

We deliver 6 units of truck mounted water treatment unit to Lao People's Democratic Republic for "The program for the improvement of capabilities to cope with Natural Disaster Caused by Climate Change" by Japan's Grand Aid program of ODA.

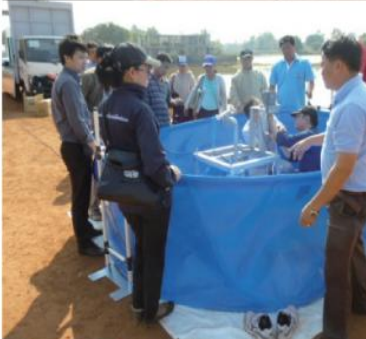

The Saito Tank is truck-mounted water treatment system and it makes drinking water by intake from river and/or creek as raw water at disaster in Laos. The quality of drinking water is in accordance with Lao's water quality standard.

We made a trial run and training for operation of this system from 21 to 25, Jan. in Vientiane, capital city of Laos.

We were very impressed with the trainees were so enthusiastic for learning the operation of this water treatment system during the training period and we are sure that our Mobile Saito Tank will be worked and performed well in Lao.

"Nihon Genryo" have worked together with waterworks over 70 years in Japan and our company's philosophy is that we deliver "the secured and safe water" as a manufacturer specialized in filter media.

We will challenge through "Water", for future, for human life not only in Japan, but also in the world.
